Support Notes

This job stream runs every 2 hours. Each instance of the job stream runs with the set of job names appended with a two character suffix.
ie **nwn1sl01[xx]** where the **xx** takes the values -

- A1 - for 09:00 hrs run
- B1 - for 11:00 hrs run
- C1 - for 13:00 hrs run
- D1 - for 15:00 hrs run
- E1 - for 17:00 hrs run
- F1 - for 19:00 hrs run
- G1 - for 21:00 hrs run
- H1 - for 07:00 hrs run

Files on the HP Unix NWPROD01 machine are located in directory -
`/var/opt/wh_prod/n1/cyclic/`

The parent directory **n1** has a UNIX link pointing to it from a directory that is mapped back to the PC servers

`/var/opt/sw/nw/abcube/links: ll *n1*`
`lnwxrwxr-x 1 nwsupp nwprod 19 Oct 19 09:31 n1 -> /var/opt/wh_prod/n1`

This directory is then visable to the PCs/Servers. There is a UNIX link set up from the mapped (PC visable) drive to the physical files -
`/var/opt/sw/nw/abcube/` is the directory that is mapped with CIFS as being visable from the NT servers as the '**Q:**' drive.
