Check Trend Scripts

Check Trend Scripts have been implemented in different Subject Areas (such as CB, TB etc). The details are documented here separately to avoid cluttering up the already "busy" flows with information that is not directly related.

The jobs are identified as nw??ctNN, where
 ??= Subject area , NN=job number
 eg nwc bct01

Please see the "trend_ctlm.xls " member in this directory for details of each job scheduling.

Example of how Check Trend works

(Note: this info is not included on individual Job flows. The nw??ctNN job is shown and this flow is referenced).
