

Backup Telelogic Synergy - Systems Flow (Opcts01d)
Subject Area: TS
Run Cycle: Daily (every calendar day) & LCDM
Calendar: n/a **Group: NWTs_SYNERGY_01**
Created by: Alex Booth
Last Updated:- 17-Aug-2006 **By: Alex Booth**

*** NOTE for nwtsbk01 only**
Runs under the owner of ctm_root (not NWP).
Script is located /var/opt/sw/ccm/src/synergy_backup.sh

Logs are written to /var/opt/sw/ccm/logs/ (not /home/NWP/)

These jobs will be renamed from NWT* to NW1* when the production Control-M agent is installed on NWDEVL81.

This will allow the mainframe jobs to then run on WBC1 (currently WBC2).

The daily SYNERGY backup files can be FTPed from the MVS host back down onto NWDEVL81 and then used to recover the SYNERGY databases.

The monthly backups are written to CART so they would need to be copied to disk prior to an FTP. Note the record format of the backups is “U”. Any copies must be “U”.

NOTE the FTP to NWDEVL81 must be a binary FTP (not ascii) otherwise the output will be corrupt.

===== Calendar Day Processing =====
