Files on the HP Unix NWPROD01 machine are located in directory -
`/var/opt/wh_prod/n1/oneoff`

The parent directory **n1** has a UNIX link pointing to it from a directory that is mapped back to the PC servers

`/var/opt/sw/nw/abccube/links: ll *n1*`
`lrwxrwxr-x 1 nwsupp nwprod 19 Oct 19 09:31 n1 -> /var/opt/wh_prod/n1`

This directory is then visable to the PCs/Servers. There is a UNIX link set up from the mapped (PC visable) drive to the physical files -
`/var/opt/sw/nw/abccube/` is the directory that is mapped with CIFS as being visable from the NT servers as the '**Q:**' drive.
