

***** NOTE NOTE NOTE *****

If any change happens to the job nwpbta61, nwpbta62, crtab_nw_pblm_cust_temp5, or any derivation of the account_loan_grade or security_quality_indicator, then you will need to change the extract in Credit Risk stream as the number of records in Credit risk and PB need to be in sync to be able to derive the customer Risk grade and customer SQL. Table nw_pblm_cust_temp5all and nw_cr_acct_temp3_yyyyymm need to have the same values and number of records (minus dummy or adjustment accounts) Use sql compare_cr_tmp3_vs_temp.sql and compare_tmp_vs_cr_temp3.sql in directory T:
\\FS_Information_Technology\DWHE\PROJECTS\Credit CRG-SQL changes to compare both tables.

Problem Loans Weekly & Monthly Overview

PB Loans Monthly

PB Loans Weekly

Notes:

- 1.) QR cxnwpbmsmz is set to 0 by job cxnwpbmsmz which runs L1, NATXHOL (ie. when monthly PB rolls in).
- 2.) It is set to 1 by job cxnwpbmsm1 which runs after nwpbmsmz (monthly PB) completes. This ensures that monthly PB completes before weekly PB jobs start when LBDM ^= LBDW. Wherever there is a @jobname on the flow there is a %jobname job opposite

@jobname These jobs run last business day of the week but NOT when the last business day of the week and last business day of the month fall on the same calendar day.

%jobname These jobs run last business day of the month

#jobname These jobs run last business day of the month and create the Problem Loan customer snapshot
