Run Cycle: Every calendar day

The diagram illustrates a database migration workflow, likely for Oracle, involving Plan and Stats tables. It is organized into several stages:

- Initial Setup & Control:**
 - Control points: `(c_DM_1f_i_Plan & c_DM_1f_i_Plan_Adj) nw1fomi015` and `(c_DM_1f_i_Plan & c_DM_1f_i_Plan_Adj) nw1fomi027`.
 - Control flow: `(flowcntl) cxnwglst23`.
- Plan Table Path (Left):**
 - Process: `NWGLDI04 Drop index on Plan table`.
 - Load: `NWGLLO04 Load nw_glp1.ctl`.
 - Data Store: `nw.nw_gl_plan_all (Oracle table)`.
 - Indexing: `NWGLND04 Create Index nw_gl_crndx_01.sql` leads to `Indexes (Oracle index)`.
 - Final Step: `NWGLDI04 Drop Index nw_nw_delIdx_01.sql`.
- Stats Table Path (Right):**
 - Process: `NWGLDI05 Drop index on Plan Stats table`.
 - Load: `NWGLLO05 Load nw_glps.ctl`.
 - Data Store: `nw_gl_plan_stats (Oracle table)`.
 - Indexing: `NWGLND05 Create Index nw_nw_index_01.sql` leads to `Indexes (Oracle index)`.
 - Final Step: `NWGLDI05 Drop Index nw_nw_delIdx_01.sql`.
- Central Flow Control:**
 - Control point: `C`.
 - Data Store: `nw_gl_roll_cntrl (Oracle table)`.
- Data Loading & Analysis Phase:**
 - Control points: `A C` and `B C`.
 - Process: `NWGLTA35 Drop & Create table ctab_nw_glroll_plan.sql` leads to `nw_gl_roll_plan (Oracle table)`.
 - Process: `NWGLTA39 Drop & Create table ctab_nw_glroll_plan_stats.sql` leads to `nw_gl_roll_plan_stats (Oracle table)`.
 - Analysis and Updates:
 - `NWGLUI35 Update Table nw_gl_upsert_35.sql` feeds into `nw_gl_roll_plan`.
 - `NWGLSV35 Create Views Grants nw_misc_03.sql` feeds into `nw_gl_roll_plan`.
 - `NWGLND35 Create Index` and `NWGLST36 Analyse` feed into `nw_gl_roll_plan`.
 - `NWGLST35 Analyse` feeds into `nw_gl_roll_plan`.
 - `NWGLUI39 Update Table nw_gl_upsert_39.sql` feeds into `nw_gl_roll_plan_stats`.
 - `NWGLSV39 Create Views Grants nw_misc_03.sql` feeds into `nw_gl_roll_plan_stats`.
 - `NWGLND39 Create Index` and `NWGLST39 Analyse` feed into `nw_gl_roll_plan_stats`.
 - `NWGLST40 Analyse table` feeds into `nw_gl_roll_plan_stats`.
- Message Handling:**
 - Processes: `NWGLMSD1 End Stream Indicator nw_nw_message_01.sql` and `NWGLMSSG End Stream Indicator nw_nw_message_01.sql`.
 - Data Store: `nw_sys_message (Oracle Table)`.
 - Control point: `NWGLMSSY End Stream Indicator nw_nw_message_01.sql`.
